

Heavy-Duty Stainless Steel Pushers for Sale

The loads in the demanding industrial and sanitary environment require reliable equipment to move the loads in a safe and efficient way. Stainless steel is a definite choice when there is a necessity to have corrosion resistance, hygiene and durability. Stainless steel pushers for sale at Superlift belong to a larger range of material handling products with ergonomics and are meant to ease strain and enhance the working process as well as withstand hard daily work.

Constructed in Tough, Hygienic Environments

By providing lift tables, lift carts, pallet trucks, skid lifters, work positioners, and custom-designed systems, Superlift Material Handling has a good reputation in lifting, tilting, rotating, moving, and positioning products with a minimal effort. The same engineering prowess has been used in our stainless steel pushers for sale available in the market which are engineered to work in environments where cleanliness and corrosion resistance are of equal importance as strength.

Constructed using the high grade stainless steel, these pushers do not rust, they are not affected by the exposure to chemicals and the frequent wash downs. They are most appropriate in the food processing plants, pharmaceutical plants, clean rooms and any other processes that require high-hygienic requirements. Clean welds and smooth surfaces are easy to sanitize and can reduce the risk of contamination in addition to a professional look.

Ergonomic Performance You Can Rely On

The use of hands to push and pull heavy carts, bins or equipment may easily cause

fatigue and injury. Superlift builds its products not only in the spirit of ergonomics, but also our stainless steel pushers for sale are no exception. Handles, geometry, and construction are designed to reduce the strain on an operator and maximize the control and stability.

On the broader Superlift line, it goes between 500 and 100,000 lbs, and the attitude of those heavy-duty pushers dictates the way we design our pushers. You can either have lighter utility carts or heavy production loads, but on both occasions, it takes less physical power to carry these, not to mention that you help avoid injuries in the workplace as well as assist in safer material handling in your facility.

Personalized Solutions to Special Applications

There are no operations which are identical and standard equipments may not necessarily cover particular workflow issues. Application specialists at Superlift collaborate with your team to learn how your loads are to be carried, the floor conditions and ergonomical issues. Based on this, we are able to suggest the appropriate [stainless steel pushers for sale](#) or create tailor-made specifications that will fit well with your carts, platforms or handling systems.

Built to Last and Backed by Support

Superlift products are constructed to perform in the most aggressive tasks and backed with customer service of the first rate and one of the best warranties in the market. In the initial talk to the actual implementation and beyond, our team is determined to assist you to derive maximum value of each piece of equipment.

In case your facility requires heavy, hygienic and ergonomic equipment to perform loading in a safer way, find what is offered by Superlift in terms of stainless steel pushers. Superlift assists in turning simple procedures of material handling into better, safer and more efficient with proven engineering, robust construction and professional service.
