

Efficient, Ergonomic Moves with a Low Profile Platform Truck from Superlift Material Handling Inc.

The transportation of materials is essential to any industrial process and the manner in which loads are moved can directly impact the safety, speed and comfort of the workers involved. Superlift Material Handling provides ergonomic material handling equipment to lift, tilt, rotate, upend, move, extend or lower your products with a minimum of stress and greatest efficiency on the shop floor.

What a Low Profile Platform Truck Does

A Low Profile Platform Truck is a truck that lacks a bed. A Low Profile Platform Truck is a truck without a bed. A low profile platform truck is a short legged and small height platform truck that allows easy under pallet, skid, machine parts or large containers access. The low deck reduces bending and lifting and the platform offers a stable surface to slide or place items directly on the truck. These trucks are often used in limited overhead clearance and limited space assembly areas, near machines and in tight aisles.

Some key features:

- Easy loading and unloading thanks to its low deck height.
- Compact and easy to handle design for small spaces.
- Usually worked with skids, rollers or dollies for added flexibility.
- Can facilitate smooth and controlled movement of heavy loads on the floor.

If used properly, a low profile platform truck can eliminate the use of pushing, pulling or hoisting heavy components that can lead to awkward lifting motions and potential strain.

Superlift's Full Range of Handling Solutions

Superlift Material Handling has one of the most comprehensive lines in the industry ranging from skid lifts to extra heavy duty lift tables. They sell the following lines:

- **Lift tables and lift carts** – Changing work height to avoid bending and lifting.
- **Upenders and electric carts** – Tilting or rotating heavy parts for assembly or packaging.
- **Stackers and pallet trucks** – Moving palletized loads efficiently through warehouses.
- **Skid lifters and work positioners** – Lifting & positioning heavy or awkward items safely and accurately.
- **Custom-designed equipment** – Solutions for special applications.

The range is available from 500 lbs to 100,000 lbs; if you require a small lift aid cart or a large industrial positioning system, there is the right solution for you. The low profile platform truck is a practical solution for transferring between higher lift tables, upenders or skid lifters and makes this part of the ecosystem.

Built Tough with Strong Support

Superlift products are designed to withstand the most challenging of applications, and offer rugged construction and componentry to last through everyday industrial use. All products have first class customer service and among the best warranties in the industry. Superlift's application specialists guide you in choosing the right equipment you need, such as the right [low profile platform truck](#) to help with your lifting and movement requirements.
