Custom Millwork, Built Around Your Bathroom

TimbeRich Inc. designs and builds custom millwork, kitchens, bathrooms and wall panels from its Oakville, Ontario workshop. Every wall cabinet, vanity and sink cabinet is measured, built and finished to order — no stock sizes, no mismatched materials. This deck covers four questions homeowners ask most often about bathroom cabinetry: wall cabinets, enclosed storage, vanities with sinks, and sink cabinet replacements.

Bathroom Wall Cabinet

Custom bathroom wall cabinets built to fit awkward spaces, finish-matched to the rest of the room by TimbeRich's Oakville workshop.

A wall-mounted cabinet does more than hold towels — it frees up floor space and keeps a small bathroom feeling open. TimbeRich builds each wall cabinet to the client's exact dimensions, matching cabinet doors, vanities and wall panels from the same finish so nothing looks like an afterthought. Soft-close hinges, adjustable shelving and a choice of mirrored or solid doors are standard, not upgrades.

- ✓ Built to your exact wall dimensions
- ✓ Soft-close hinges and adjustable shelves
- ✓ Finish-matched to vanity and wall panels

Cabinet Storage with Doors

Enclosed cabinet storage with shaker, flat-panel or wood-grain doors, sized for real bathroom clutter, not stock dimensions.

Open shelving looks good in photos; closed storage is what actually keeps a bathroom tidy day to day. TimbeRich fabricates cabinet storage with doors in shaker, flat-panel or natural wood-grain styles, sized to hold everything from hair tools to cleaning supplies. Every door is hung and aligned in-house, so uneven gaps — the usual complaint with flat-pack cabinets — simply aren't an issue here.

- ✓ Shaker, flat-panel or wood-grain doors
- ✓ Custom-sized interior compartments
- ✓ Hung and aligned in-house, not flat-packed

Bathroom Vanity with Sink

Floating or freestanding bathroom vanities with an integrated sink, built to any width and finish by TimbeRich.

The vanity sets the tone for the whole bathroom, so it's usually the piece worth customizing first. TimbeRich builds vanities with an integrated sink in floating or freestanding formats, in any width from a single-basin powder room unit to a double-sink master suite console. Countertop, basin style and cabinet finish are chosen together, so the piece reads as one design rather than parts bolted together.

- ✓ Single or double-basin layouts
- ✓ Floating or freestanding formats
- ✓ Countertop and basin chosen as one design

Bathroom Sink Cabinets

Sink cabinets built around the plumbing you already have, finished to match the vanity or wall panels elsewhere in the room.

Not every project starts from a blank slate — sometimes the sink and plumbing stay, and only the cabinet underneath needs replacing. TimbeRich measures around existing plumbing and builds a sink cabinet that fits without relocating pipework, in a finish that matches the vanity, wall panels or cabinetry elsewhere in the home. It's a faster, lower-disruption way to update a bathroom that already works structurally.

- ✓ Built around your existing plumbing
- ✓ Finish-matched to current cabinetry
- ✓ Faster, lower-disruption installation
