

Handle Heavy Parts Safely with 5000 lb Upenders from Superlift Material Handling Inc.

Manual, manual tilting, or turning of large parts in manufacturing, assembly or heavy industrial applications is slow and dangerous. When workers attempt to rotate heavy components for welding, machining or inspection, they are frequently injured to their backs, shoulders, or knees. A smart, ergonomic solution, is to use 5000 lb upenders which are specially designed to lift, tilt and rotate loads up to 5,000 lb without putting strain on the operator. The 5000 lb upenders are just one of Superlift Material Handling Inc's complete line of ergonomic material handling equipment that will lift, tilt, rotate, upend, move, extend or lower your products safely and effectively.

What 5000 lb Upenders Do

5000 lb upender is a very powerful lifting/tilting apparatus capable of lifting a heavy component, and turning it vertically or horizontally. This is ideal for:

- Turning over heavy molds, dies or metal parts.
- Filling, cleaning or inspecting tanks, drums, or containers by tilting.
- Turning of bulky assemblies to allow both sides to be welded or worked.

Key benefits include:

- Minimised manual lifting and twisting movements.
- Improved access to all sides of a part, increasing work quality and speed.
- Predictable and repeatable positioning for consistent operations.

With a 5000 lb upender, plants can capitalize on work that is difficult with proper and repeated control and protection for the worker and product.

Superlift's Broad Handling Equipment Line

Superlift Material Handling is an ergonomic material handling product line, much more than just upenders. The complete range features:

- **Lift tables and lift carts** – lifting and lowering to working heights..
- **Electric carts and stackers** – for transporting heavy materials in workshops and warehouses.
- **Pallet trucks and skid lifters** – Safely and efficiently moving palletized or skidded loads.
- **Work positioners and custom-designed equipment** – Making tools fit unique processes and spaces.

From 500lbs to 100,000lbs, Superlift has a solution that can handle light duty assist equipment up to heavy duty industrial tools! The [5000 lb upenders](#) seamlessly integrate into this system, connecting the lifting function with a complete rotation system.

Built for Tough Environments and Backed by Support

Superlift's equipment is designed to endure the most challenging industrial environments, featuring solid frames and heavy duty hardware and components that will last a lifetime of use on concrete floors and in high traffic zones. Every 5000 lb upender comes with smooth pivoting mechanisms and secure locking that ensures that the upender does not move accidentally or unpredictably, and is designed for long term reliability.

Superlift is committed to providing a top quality warranty and customer service for their products. Superlift application specialists will assist you in selecting the correct upender, setting the tilt range and adapting the tilt to your working procedure.

Superlift Material Handling Inc. is always available to consult with you first about any ergonomic issue involving lifting heavy items. Check the Superlift Material Handling Inc. website to see their complete line of products and to locate the 5000 lb upender that fits your lifting and tilting requirements.
