ACHIEVE OPTIMAL WELLNESS WITH LYNSENE CARE

Psychiatric Evaluation

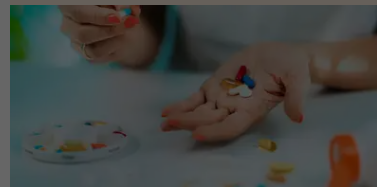

A thorough initial assessment that helps us understand your mental health needs. This includes a clinical interview, review of your medical and psychiatric history, and a mental status exam. The goal is to provide a clear diagnosis and develop a personalized treatment plan tailored to your specific concerns.

Individual Talk Therapy

One-on-one therapy sessions that offer a safe, confidential space to explore your thoughts, emotions, and experiences. Through supportive conversation and evidence-based techniques, we help you work through challenges such as stress, trauma, grief, or relationship issues and develop healthy coping strategies.

Medication Management

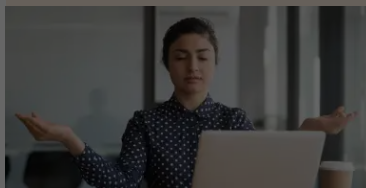

If medication is part of your treatment, we provide careful monitoring to ensure it's working effectively for you. This includes prescribing the right medication, adjusting doses when needed, reviewing side effects, and answering any questions you may have—always with your comfort and safety in mind.

Supportive Therapy

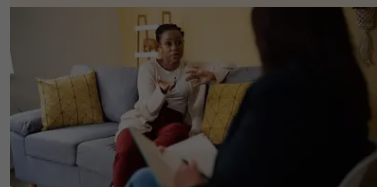

A flexible and compassionate approach that focuses on providing encouragement, validation, and problem-solving strategies. This type of therapy helps you navigate life's stressors, build resilience, and stay grounded through difficult times, especially when facing ongoing mental health symptoms.

Telepsychiatry Session

Secure, HIPAA-compliant virtual appointments that allow you to access psychiatric care from anywhere. Whether you're at home or on the go, telepsychiatry makes it easy to receive consistent support and stay connected with your provider.

Mental Health Consultation

These are professional evaluations for individuals seeking an expert opinion on their mental health. Whether you're new to psychiatric care or looking for a second opinion, consultations help clarify diagnoses, recommend treatment options, and answer questions about medications or therapy.
