About Mieux Technologies

Mieux Technologies Pvt Ltd helps businesses move workloads to the cloud without the guesswork. The team designs cloud based computing services around what a company actually needs — not a one-size-fits-all package — so growth, security and cost stay in balance from day one.

From first architecture review to daily monitoring, every engagement is handled by engineers who treat uptime, data security and clear communication as non-negotiable, not an afterthought.

Average Uptime

Cloud Based Computing Services

A strong cloud foundation covers far more than server space. Mieux Technologies builds and runs the full stack:

- Public, private & hybrid cloud hosting
- Scalable compute & storage provisioning
- Automated backup & disaster recovery
- Network architecture & load balancing
- Identity & access management
- Cost monitoring & resource optimisation
- Container & Kubernetes deployment
- 24/7 infrastructure monitoring

Every environment is built to scale up during peak demand and scale down when it's not needed — so infrastructure spend always matches actual usage.

BUILT FOR YOUR BUSINESS

Cloud Computing Solutions

Different businesses need different shapes of cloud solution. Mieux Technologies packages its offering around three common needs:

Startups & Scale-ups

Lean, cost-efficient environments that expand smoothly as the user base grows.

Enterprise Workloads

Robust, compliant architecture for high-volume, mission-critical applications.

Legacy Modernisation

Phased migration of on-premise systems into secure, modern cloud environments.

Cloud Computing Consulting Services

Before any workload moves, consultants map out cost, risk and architecture — so every decision is deliberate, not reactive:

01

Assess

Audit current systems, costs and readiness for cloud migration.

—02

Design

Architect a secure, right-sized environment for the workload.

—03

Migrate

Move applications and data with minimal downtime.

—04

Optimise

Tune performance and cost continuously post-migration.

Cloud Computing Managed Services

Once live, the cloud environment still needs eyes on it every hour of every day. The managed services team handles:

 **24/7 Monitoring**

 **Patch Management**

 **Security Audits**

 **Cost Reviews**

 **Backup Checks**

 **Incident Response**
