

Advanced Neurological & Neurosurgical Care at Hayat Hospital, Guwahati

Advanced neurological diagnostic assessment and brain health care at Hayat Hospital.

Comprehensive Neurological Care & Early Intervention

The human central nervous system is an intricate network that controls every sensory, cognitive, and motor function in the body. When neurological disorders strike—whether in the form of sudden ischemic stroke, chronic epilepsy, debilitating migraines, or progressive neurodegenerative conditions like Parkinson’s disease—timely and accurate clinical diagnosis is paramount. At Hayat Hospital, patients receive holistic medical evaluation and personalized treatment plans designed to preserve brain health and restore quality of life.

Finding the [Best Neurologist in Guwahati](#) ensures that patients benefit from state-of-the-art neuro-diagnostic modalities, including high-resolution MRI, CT angiography, electroencephalography (EEG), and electromyography (EMG). Early intervention not only prevents long-term nerve damage but also accelerates recovery times for patients experiencing acute cerebrovascular events.

State-of-the-art neurosurgical theatre and real-time intraoperative imaging suite.

Surgical Precision & Advanced Neurotrauma Management

Complex surgical conditions involving the brain and spinal cord demand exceptional surgical expertise and advanced intraoperative technology. Whether managing brain tumors, complex spinal fractures, aneurysms, or traumatic brain injuries, access to top-tier surgical care can significantly impact clinical outcomes. Consulting the [Best Neurosurgeon in Guwahati](#) at Hayat Hospital provides patients access to minimally invasive spine surgery, micro-neurosurgery, and emergency neuro-trauma interventions.

Equipped with modern operation theaters, real-time intraoperative monitoring, and dedicated neuro-intensive care units (NICU), Hayat Hospital offers 24/7 emergency response for critical head trauma and stroke care. The multidisciplinary team combines surgical mastery with specialized neuro-rehabilitation to support patients through every phase of recovery.

24/7 Stroke & Trauma Unit

Immediate emergency thrombolysis and critical neuro-intensive care support.

Micro-Neurosurgery

Precision surgical removal of brain tumors and vascular lesions using advanced optics.

Minimally Invasive Spine Care

Modern surgical techniques for herniated discs and spinal cord stabilization.
