

Managed Cloud Hosting Service

Running your own cloud is a full-time job, and most companies would rather not hire for it. A **managed cloud hosting service** puts that job in expert hands. Our engineers plan the environment, move your applications across, keep patches current and watch the servers day and night, so a traffic spike or a failed disk becomes our problem to solve, not yours.

- Cloud planning, migration and setup
- Backups, patching and security upkeep
- Round-the-clock monitoring with a real person to call

Managed VPS Hosting

A virtual private server gives you dedicated resources without the price of a whole machine, but someone still has to configure and guard it. With **managed VPS hosting**, that someone is us. We set up the server, tune it for your website or application, apply updates and respond when something looks wrong, so you get the speed of a private server without the late-night troubleshooting.

- Server setup tuned to your website or application
- Regular updates, firewall care and malware checks
- Quick support when an alert comes in

VPS Hosting Provider

Picking a VPS hosting provider is mostly about trust. Look past the plan size and ask who answers when the server stalls, how backups are handled and whether the team explains things in plain language. Mieux Technologies keeps that simple: clear plans, hands-on support from engineers, and a Delhi office you can actually visit.

- Plans sized to what your project really needs
- Engineers, not scripts, on the support line
- Local office in New Delhi for face-to-face help

Thank You

Ready to hand your servers to a team that watches them around the clock?
